

Master Data Management

The Challenge

A large Energy Utility operates multiple Power Stations across the country. Each power station requires skilled technicians to troubleshoot problems locally, leading to high staff costs and the inability for one station to learn from the experiences of others, reducing reliability and ability to earn revenue.

Their current strategy was to centralise the Monitoring and Control of these power stations using near real time access to data across all sites.

This strategy was severely limited by the fact that the data from the sites was inconsistent from site to site and the data within the central operational systems was not integrated.

Our Solution

InfoCentric was engaged to provide Information Architecture services to develop an architecture capable of providing a consistent and integrated set of data from multiple sites to allow operators to monitor and control all sites simultaneously, comparing data from site to site.

In order to monitor and control the sites most efficiently, the operators required data not only from the control systems but also maintenance data, documents, drawings and historical trends.

The Benefits

InfoCentric employed best practices and thought leadership in Information Management domain underpinned by a team with trusted expertise and capabilities. Our Team provided a Monitoring and Control solution to deliver client's data in an integrated form, in near real time, into a central location from multiple sites that resulted saving time and money whilst increasing the accuracy of reports generated.

How will InfoCentric help enhance your organization Insight today and tomorrow?

Goals

- Increasing growth and effectiveness
- Decreasing costs and improving efficiency
- Mitigate risks and meet compliance requirements

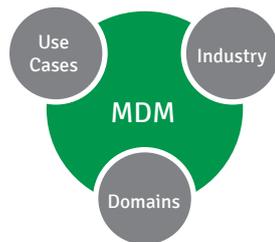

Life Cycle

Author > Store > Synch > Enrich > Consume > Archive >

- How do you optimise the life cycle?
- Who and what is involved?

Scope

- Map out how MDM should look

MDM Journey

- Where are we now?
- Where are we going?
- How do we get there?

InfoCentric Master Data Management Strategy

Trusted Delivery Partner
